

How does it work?

```
data Query : DB f -> Schema -> Type where  
  Select : {db : DB f} -> Tables db s ->  
    Expr s INTEGER ->  
    (s' : Schema) ->  
    {ok : SubSchema s' s} ->  
    {auto solveIt : decSubSchema s' s = Yes ok} ->  
    Query db s'
```
